WCICWT

CSS Animations

The Brief

The goal was to create a website that would compliment the designs and videography on my cooking account on Instagram.

Visit the Site

The Build

I started with the HTML structure, thinking carefully about how this may look across different size browsers.

There are several images so that the correct size can be used depending on the size of the screen.

The site is highlighting how to minimize waste and this is acted out on the desktop versions with a text message CSS animation.
